Lesson Plan- YEAR 9

<b>Subject</b>	<b>Chemistry</b>
<b>Class/ Section</b>	<b>Year 9</b>
<b>Week</b>	<b>Week 4 - 19<sup>th</sup> September to 23<sup>rd</sup> September</b>
<b>Work send to students by</b>	<b>Google classroom</b>
<b>Total number of lessons per week</b>	<b>3</b>
<b>Unit/Topic</b>	<b>SC2b Filtration and Crystallisation</b>
<b>Key Vocabulary</b>	<b>Crystallisation, Saturated solution</b>
<b><u>Specific Learning objectives</u></b> <b>and <u>Specific Intended Learning Outcomes</u></b>	<b>Lesson 1 and 2 . Filtration and crystallisation</b>  <b><u>Specific Learning objectives</u></b>  Explain the experimental techniques for separation of mixtures by: (a) filtration. (b) crystallisation.  Evaluate the hazards and risks when separating mixtures by filtration and crystallisation.  <b><u>Specific Intended Learning Outcomes</u></b>  Explain how mixtures are separated by filtration.  Explain the formation of crystals during crystallisation.  Explain ways of reducing risk when separating mixtures by filtration and crystallisation.

<p><b>Tasks</b></p>	<p><b><u>Tasks</u></b></p> <ol style="list-style-type: none"> <li>1. Identify the apparatus required for filtration and the how can we separate insoluble substances from a mixture.</li> <li>2. Watch <b>ALDS</b> video <i>Sea salt production</i> and answer the questions given in the video</li> <li>3. Explain the step by step method for the separation of soluble salt by crystallisation method</li> <li>4. Explain why large and small crystals are formed ( Q. 5 and 6 in the text book)</li> <li>5. Tabulate the hazards , harm and the precautions needed to reduce the risk during filtration and crystallisation</li> <li>6. . Exam style questions ( difference between risk and hazards )</li> </ol>
<p><b>Assessment Criteria/ Essential questions</b></p>	<p><b>Support:</b> Identify the apparatus set up used for the separation of spilled sand and salt mixture by filtration and crystallisation</p> <p><b>Stretch:</b> Explain step by step method for the separation of the spilled sand and salt mixture. Explain the science behind each step and explain the safety procedures in your method.</p> <p><b>Extend:</b> During the spillage and recovery of sand and salt other soluble salts may have been mixed with the ‘pure’ soluble salt. How can we show that the recovered salt is a pure substance?</p>
<p><b>Resources</b></p>	<p>Edexcel GCSE (9-1) students book ,</p> <p>Doddle interactive power point</p> <p>A power point to display learning objectives, tasks and images</p>
	<p><b>Lesson 3</b></p> <p><b><u>Specific Learning objectives</u></b></p> <p>Recall the experimental techniques used for the separation of mixtures by filtration and crystallisation</p> <p>Recall ways of reducing risk when separating mixtures by filtration and crystallisation</p>
	<p><b><u>Specific Intended Learning Outcomes</u></b></p> <p>Apply students’ previous knowledge on filtration and</p>

	crystallisation in different level of questions  By the end of the lesson, pupils will be able to answer the scientific enquiry based and application level questions
	<b>Task</b> Complete the worksheet –SC2b Exam style questions
	<b><u>Assessment Criteria/ Essential questions:</u></b>  When students have completed the worksheet questions, check which students have difficulty with which questions and use the level of problem to identify any areas for revisiting before moving on to the next topic.  <b><u>Support:</u></b> Students could work in pairs to complete this activity.  <b>Stretch :</b> Ask students to complete the Extra Challenge question on difference hazards and risks.  <b>Extend :</b> Application of filtration and crystallisation in our day today life
	<b>Resources</b> worksheets SC2 b

مدرسة القديسة مريم الكاثوليكية الثانوية – دبي  
**ST. MARY'S CATHOLIC HIGH SCHOOL, DUBAI**

**Lesson Plan –YEAR 10**

<b>Subject</b>	<b>Chemistry</b>
<b>Class/ Section</b>	<b>Year 10</b>
<b>Week</b>	<b>Week 4 : 19<sup>th</sup> Sept – 23<sup>rd</sup> September, 2021</b>
<b>Work send to students by</b>	<b>Google classroom</b>
<b>Total number of lessons per week</b>	<b>4</b>
<b>Unit/Topic</b>	<b>Calculations involving masses</b>

<p><b>Key Vocabulary</b></p>	<p>solute, solvent, solution, concentration, closed system, non-enclosed system</p>
<p>Lessons 1,2,3,4–Live Zoom lesson along with face to face instruction for students present on a particular day</p> <p>Work will be assigned in Google classroom which will be matched to the student's ability.</p> <p><b>Assessment Criteria/ Essential questions</b></p> <p><b>Resources</b></p>	<p><b><u>Lesson 1 : Conservation of mass</u></b></p> <p><b><u>Specific Learning objectives</u></b> Calculate the concentration of solutions in <math>\text{g dm}^{-3}</math></p> <p><b><u>Specific Intended Learning Outcomes</u></b></p> <ul style="list-style-type: none"> <li>• Define concentration of solutions.</li> <li>• Use the formula <math>C = m/V</math> to calculate the concentration in <math>\text{g/dm}^3</math></li> </ul> <p><b><u>Tasks:</u></b></p> <ol style="list-style-type: none"> <li>1.Recap of the terms solute, solvent and solution.</li> <li>2.Ask students to read the label on the mineral water bottle and find the units for concentration of the ions.</li> <li>3.Ask students to frame the definition of concentration and deduce the formula for finding concentration (based on the units). Guide them where necessary.</li> <li>4. Explain how to calculate concentration with examples. Emphasize that the mass should be in grams and volume should be in <math>\text{dm}^3</math></li> <li>5. Answer Q1 from text bk page no. 74, in the text bk.</li> </ol> <p><b>Support:</b> Calculation the concentration of solution Volume = <math>0.250 \text{ dm}^3</math> mass = 2.5g</p> <p><b>Stretch:</b> <math>50 \text{ cm}^3</math> of a solution of potassium chloride contained 0.6 g of dissolved solid. Calculate the concentration of the solution in <math>\text{g dm}^{-3}</math>.</p> <p><b>Extend:</b> Find the mass of copper sulfate dissolved in <math>250 \text{ cm}^3</math> of a solution to obtain a concentration of <math>20 \text{ gdm}^{-3}</math>.</p> <p>Edexcel GCSE (9-1) Chemistry textbook. Power point.</p>
	<p><b><u>Lesson 2: Conservation of mass (contd)</u></b></p> <p><b><u>Specific Learning objectives</u></b></p> <ul style="list-style-type: none"> <li>• Explain the law of conservation of mass applied to:             <ol style="list-style-type: none"> <li>(a) a closed system including a precipitation reaction in a closed flask</li> <li>(b) a non-enclosed system including a reaction in an open flask that takes in or gives out a gas.</li> </ol> </li> </ul> <p><b><u>Specific Intended Learning Outcomes</u></b></p> <ul style="list-style-type: none"> <li>• State Law of conservation of mass.</li> <li>• Define precipitation reaction.</li> <li>• Differentiate between a closed and non-enclosed system.</li> </ul> <p><b><u>Tasks:</u></b></p> <ol style="list-style-type: none"> <li>1. Recap of empirical and molecular formula.</li> <li>2. Students watch a video of a precipitation reaction between lead</li> </ol>

**Assessment Criteria/  
Essential questions**

- nitrate and potassium iodide solution and write their observations.
3. Students come up with the definition of precipitation reaction.
  4. Students watch another video of the reaction between calcium carbonate and hydrochloric acid and write their observations.
  5. Students compare and infer which of these are examples of closed and non-enclosed systems and reason why.
  6. Teacher states and explains the law of conservation of mass.
  7. Answer Q2 and Q3 from text bk page no.75, in the notebook.

**Support:** Sodium chloride solution reacts with silver nitrate solution to form a white solid, silver chloride. State the type of reaction.

**Stretch:** Zinc reacts with sulphuric acid to form zinc sulphate and hydrogen gas. Compare with reaction between sodium chloride and silver nitrate and state with reason whether the system is closed or non-enclosed.

**Extend:** Calculate the mass of oxygen that combines with 20.4 g of magnesium to form 34.0 g of magnesium oxide.

**Resources**

Lesson Plan – YEAR 11

<b>Subject</b>	<b>Chemistry</b>
<b>Class/ Section</b>	<b>Year 11</b>
<b>Week</b>	<b>Week 4 : 19<sup>th</sup> – 23<sup>rd</sup> September, 2021</b>
<b>Work send to students by</b>	<b>Google classroom</b>
<b>Total number of lessons per week</b>	<b>5</b>
<b>Unit/Topic</b>	<b>Quantitative analysis and Hydrocarbons</b>
<b>Key Vocabulary</b>	<b>Hydrocarbon , alkanes , saturated</b>
<p><b>Lessons 1,2,3,4,5–Live Zoom lesson along with face to face instruction for students present on a particular day</b></p> <p><b>Work will be assigned in google classroom which will be matched to the students ability.</b></p> <p><b>Assessment Criteria/ Essential questions</b></p> <p><b>Resources</b></p>	<p><b><u>Lesson 1 and 2</u></b></p> <p><b><u>Specific Learning objectives</u></b></p> <ul style="list-style-type: none"> <li>•To reinforce the concept of atom economy, percentage yield , titration calculations.</li> </ul> <p><b><u>Specific Intended Learning Outcomes</u></b></p> <p>Solve the problems based on atom economy , percentage yield , concentration and titration calculations.</p> <p><b><u>Tasks:</u></b></p> <p>Students will do challenging questions from past papers.</p> <p><b>Support:</b> Solve the problems of atom economy and percentage yield</p> <p><b>Stretch:</b> Solve questions on standard solutions and procedure of titration.</p> <p><b>Extend:</b></p> <p>Edexcel GCSE (9-1)Chemistry textbook. Power point , Video.</p>

### Lesson 3&4: Alkanes

#### Specific Learning objectives

Recall that hydrocarbons are compounds that contain carbon and hydrogen only

Describe crude oil as:

a a complex mixture of hydrocarbons

b containing molecules in which carbon atoms are in chains or rings (names, formulae and structures of specific ring molecules not required)

c an important source of useful substances (fuels and feedstock for the petrochemical industry)

d a finite resource

#### Specific Intended Learning Outcomes

Describe that the chemicals obtained from crude oil are called hydrocarbons and that a hydrocarbon is a molecule consisting of carbon and hydrogen atoms only.

Understand the terms fossil fuel, renewable resource and non-renewable resource.

Recall that crude oil is a liquid mixture of hydrocarbons that includes dissolved gases and solids.

#### Tasks:

Research about crude oil formation.

Teacher shows the animation of formation of crude oil.

Collect the key points and discuss with the peers and understand the formation of crude oil.

Discuss the problems of using fossil fuels.

**Support:** Suggest examples of fossil fuels.

**Stretch:** Explain the formation of crude oil.

**Extend:** Find the reason why diesel oil is categorized as non renewable fossil fuel.

Edexcel GCSE (9-1) Chemistry textbook. Power point , Video.

**Assessment Criteria/  
Essential questions**

**Resources**

<p><b>Assessment Criteria/ Essential questions</b></p> <p><b>Resources</b></p>	<p><b><u>Lesson 5:</u></b></p> <p><b><u>Specific Learning objectives</u></b> Describe and explain the separation of crude oil into simpler, more useful mixtures by the process of fractional distillation</p> <p><b><u>Specific Intended Learning Outcomes</u></b></p> <p>Know that each compound vaporises and condenses at different temperatures, and so they are separated.</p> <p>Explain the process of fractional distillation to separate the crude oil into useful fractions.</p> <p><b><u>Tasks:</u></b> Students watch the video of fractional distillation.</p> <p>Discuss the procedure and principles in fractional distillation in groups</p> <p><b>Support:</b> Define fractional distillation <b>Stretch:</b> Explain the procedure for fractional distillation. <b>Extend:</b> Compare the advantages of using fractional distillation over simple distillation.</p> <p>Edexcel GCSE (9-1)Chemistry textbook. Lesson Plan –YEAR 13

Subject	Chemistry
Class/ Section	Year 13
Week	Week 4 : 19 <sup>th</sup> September to 23 <sup>rd</sup> September, 2021
Work send to students by	Google classroom
Total number of lessons per week	3
Unit/Topic	Acid-base equilibria
<b>Key Vocabulary</b>	<b>Buffer solution</b>
Lessons 1,2,3–Live Zoom lesson along with face to face instruction for students present on a particular day  Work will be assigned in google classroom which will be matched to the students ability.	<b><u>Lesson 1&amp;2</u> Buffer solutions</b> <b><u>Specific Learning objectives</u></b> <ul style="list-style-type: none"><li>• Understand what is meant by the term ‘buffer solution’</li><li>• Understand the action of a buffer solution</li><li>• Calculate the pH of a buffer solution given appropriate data</li><li>• Calculate the concentrations of solutions required to prepare a buffer solution of a given pH</li><li>• Understand the roles of carbonic acid molecules and hydrogencarbonate ions in controlling the pH of blood.</li><li>• Explain the buffering action during the titration of a weak acid–strong base.</li></ul> <b><u>Specific Intended Learning Outcomes.</u></b> <ul style="list-style-type: none"><li>• Define the term buffer solution</li><li>• Explain the uses of buffer solutions</li><li>• Explain how a buffer solution works</li><li>• Calculate the pH of buffer solutions</li><li>• Describe how a buffer solution can be made up for a given pH</li><li>• Explain the buffer system in the blood.</li></ul>

**Assessment Criteria/  
Essential questions**

**Tasks:**

1. Research the everyday uses of buffers
2. Discuss the principles behind making an acidic or a basic buffer solution. Explain how buffers resist small changes in pH.
3. Write the equations to show buffer action for an acidic buffer  $\text{CH}_3\text{COOH}/\text{CH}_3\text{COO}^-\text{Na}^+$  system and the alkaline buffer  $\text{NH}_3/\text{NH}_4^+$  system.
4. Explain the buffering action during a weak acid–strong base titration.
5. Answer the questions from textbook page no.42

**Support:** Define buffer solutions with examples

**Stretch:** Explain how buffer solutions work with relevant equations.

**Extended:** Solve numericals to find the pH of buffer solutions, changes in pH when small amounts of acids or alkalis are added to buffer solutions.

Edexcel A level Chemistry 2 textbook. Power point , Video

**Resources**

### Lesson 3: Buffer solutions and pH curve

#### Specific Learning objectives

- Understand how to use a weak acid–strong base titration curve to:(i) demonstrate buffer action (ii) determine  $K_a$  from the point at which half the acid is neutralised.
- Understand why there is a difference in the standard enthalpy changes of neutralisation values for strong and weak acids.

#### Specific Intended Learning Outcomes

- Explain the term equivalence point.
- Evaluate  $K_a$ ,  $K_b$  from titration curves of weak acid – strong base titrations.
- Compare the enthalpy changes of neutralization values of strong acid- strong base and strong acid – weak base/ strong base – weak acid.
- Explain why the values are lower than  $-57.1\text{kJmol}^{-1}$

#### Tasks:

1. Draw the titration curve on the whiteboard and ask students to suggest where the buffering action occurs.
2. Discussion about what is happening in terms of the removal of a small number of  $\text{H}^+$  ions and the logarithmic nature of the pH scale.
3. Explain the buffering action during a weak acid–strong base titration.
4. Discuss half-volume method and determination of  $\text{p}K_a$  of a weak acid.

**Support:** Explain the buffering action during a weak acid–strong base titration.

**Stretch:** Describe half volume method and determination of  $\text{p}K_a$  values.

**Extend:** Determine  $K_a$  from pH titration curve.

**Assessment Criteria/  
Essential questions**

**Resources**

**Support:** Identify the colour of reacting species and product in the reaction.

**Stretch:** Write the formula for the species which are responsible for the colour.

**Extend:** Write the balanced equation for the reaction.

Edexcel A level Chemistry 2 Textbook

Interactive power point from Board works

**Lesson 2 and 3 – Theory of ligand substitution reaction**

**Specific Learning objectives**

Understand that the substitution of small, uncharged ligands (such as H<sub>2</sub>O) by larger, charged ligands (such as Cl<sup>-</sup>) can lead to a change in coordination number.

**Specific Intended Learning Outcomes**

Explain how the substitution of small, uncharged ligands (such as H<sub>2</sub>O) by larger, charged ligands (such as Cl<sup>-</sup>) leads to a change in coordination number and hence the shape of the complex.

**Tasks:** Recall the different substitution reactions.

Discuss different theories which support the feasibility of substitution reactions.

**Support:** Recall the colour change for the ligand substitution reaction

**Stretch:** Write equations to represent substitution reaction

**Extend:** Explain the feasibility of substitution reaction with the help of entropy factor.
