Portion for First term examination - Jan, 2021

PHYSICS (IGCSE)

Paper 1 – 75 marks Time: 1 hour 30 minutes

Assesses core content that is **not** in bold and does not have a 'P' reference.

Paper 2 – 60 marks Time: 1 hour 15 minutes

Assesses **all the content**, including content that is **in bold** and has a **'P' reference**.

Types of questions : A mixture of different question styles, including multiplechoice questions, short-answer questions, calculations and extended openresponse questions.

Unit 1- Forces and motion	
1.1	Use the following units: kilogram (kg), metre (m), metre/second (m/s),
	metre/second ² (m/s ²), newton (N), second (s) and newton/kilogram (N/kg)
1.2P	Use the following units: newton metre (Nm), kilogram metre/second (kg
	m/s)
1.3	Plot and explain distance-time graphs
1.4	Know and use the relationship between average speed, distance moved and time
	taken.
1.5	Practical: investigate the motion of everyday objects such as toy cars or tennis
	balls
1.6	Know and use the relationship between acceleration, change in velocity and time
1.7	Plot and explain velocity-time graphs
1.8	Determine acceleration from the gradient of a velocity-time graph
1.9	Determine the distance travelled from the area between a velocity-time graph
	and the time axis
1.10	Use the relationship between final speed, initial speed, acceleration and distance
	moved $v^2 = u^2 + (2 \times a \times s)$
1.11	Describe the effects of forces between bodies such as changes in speed, shape or
	direction
1.12	Identify different types of force such as gravitational or electrostatic
1.13	Understand how vector quantities differ from scalar quantities
1.14	Understand that force is a vector quantity
1.15	Calculate the resultant force of forces that act along a line
1.16	Know that friction is a force that opposes motion
1.17	Know and use the relationship between unbalanced force, mass and acceleration
1.18	Know and use the relationship between weight, mass and gravitational field
	strength
1.19	Know that the stopping distance of a vehicle is made up of the sum of the
	thinking distance and the braking distance
1.20	Describe the factors affecting vehicle stopping distance, including speed, mass,
	road condition and reaction time
1.21	Describe the forces acting on falling objects (and explain why falling objects

	reach a terminal velocity)
1.22	Practical: investigate how extension varies with applied force for helical
	springs, metal wires and rubber bands
1.23	Know that the initial linear region of a force-extension graph is associated with
	Hooke's law
1.24	Describe elastic behaviour as the ability of a material to recover its original
	shape after the forces causing deformation have been removed
1.25P	Know and use the relationship between momentum, mass and velocity
	p=mv
1.26P	Use the idea of momentum to explain safety features:
1.27P	Use the conservation of momentum to calculate the mass, velocity or
	momentum of objects
1.28P	Use the relationship between force, change in momentum and time taken
1.29P	Demonstrate an understanding of Newton's third law
1.30P	Know and use the relationship between the moment of a force and its
	perpendicular distance from the pivot: moment = force × perpendicular
	distance from the pivot
1.31P	Know that the weight of a body acts through its centre of gravity
1.32P	Use the principle of moments for a simple system of parallel forces acting in
	one plane
1.33P	Understand how the upward forces on a light beam, supported at its ends,
	vary with the position of a heavy object placed on the beam

Unit 2 Electricity

2.1	Use the following units: ampere (A), coulomb (C), joule (J), ohm (Ω), second (s), volt (V) and watt (W)
2.2	
2.2	Understand how the use of insulation, double insulation, earthing, fuses and
	circuit breakers protects the device or user in a range of domestic appliances
2.3	Understand why a current in a resistor results in the electrical transfer of energy
	and an increase in temperature, and how this can be used in a variety of domestic
	contexts
2.4	Know and use the relationship between power, current and voltage: power =
	current \times voltage P = I \times V and apply the relationship to the selection of
	appropriate fuses
2.5	Use the relationship between energy transferred, current, voltage and time:
	energy transferred = current \times voltage \times time E = I \times V x t
2.6	Know the difference between mains electricity being alternating current (a.c.)
	And direct current (d.c.) Being supplied by a cell or battery
2.7	Explain why a series or parallel circuit is more appropriate for particular
	applications, including domestic lighting 2.8 2.9
2.8	Understand how the current in a series circuit depends on the applied voltage
	and the number and nature of other components
2.9	Describe how current varies with voltage in wires, resistors, metal filament
	lamps and diodes, and how to investigate this experimentally
2.10	Describe the qualitative effect of changing resistance on the current in a circuit
2.11	Describe the qualitative variation of resistance of light-dependent resistors (ldrs)
	with illumination and thermistors with temperature
2.12	Know that lamps and leds can be used to indicate the presence of a current in a
	The second

	circuit
2.13	Know and use the relationship between voltage, current and resistance: voltage
	= current \times resistance V = I \times R
2.14	Know that current is the rate of flow of charge
2.15	Know and use the relationship between charge, current and time: charge =
	current \times time Q = I \times t
2.16	Know that electric current in solid metallic conductors is a flow of negatively
	charged electrons
2.17	Understand why current is conserved at a junction in a circuit
2.18	Know that the voltage across two components connected in parallel is the same
2.19	Calculate the currents, voltages and resistances of two resistive components
	connected in a series circuit
2.20	Know that: • voltage is the energy transferred per unit charge passed
	• the volt is a joule per coulomb
2.21	Know and use the relationship between energy transferred, charge and voltage:
	energy transferred = charge \times voltage E = Q \times V
2.22P	Identify common materials which are electrical conductors or insulators,
	including metals and plastics 2.23P 2.24P 2. 2.26P 2.27P 2.28P
2.23P	Practical: investigate how insulating materials can be charged by friction
2.24P	Explain how positive and negative electrostatic charges are produced on
	materials by the loss and gain of electrons
2.25P	Know that there are forces of attraction between unlike charges and forces
	of repulsion between like charges
2.26P	Explain electrostatic phenomena in terms of the movement of electrons
2.27P	Explain the potential dangers of electrostatic charges, e.g. When fuelling
	aircraft and tankers
2.28P	Explain some uses of electrostatic charges, e.g. In photocopiers and inkjet
	printers
Unit 3 V	Vaves

Unit 3 Waves

3.1	Use the following units: degree (°), hertz (Hz), metre (m), metre/second (m/s)
	and second (s)
3.2	Explain the difference between longitudinal and transverse waves
3.3	Know the definitions of amplitude, wavefront, frequency, wavelength and
	period of a wave
3.4	Know that waves transfer energy and information without transferring matter
3.5	Know and use the relationship between the speed, frequency and wavelength of
	a wave
3.6	Use the relationship between frequency and time period
3.7	Use the above relationships in different contexts including sound waves and
	electromagnetic waves
3.8	Explain why there is a change in the observed frequency and wavelength of a
	wave when its source is moving relative to an observer, and that this is known as
	the Doppler effect
3.9	Explain that all waves can be reflected and refracted
3.10	Know that light is part of a continuous electromagnetic spectrum that includes
	radio, microwave, infrared, visible, ultraviolet, x-ray and gamma ray radiations
	and that all these waves travel at the same speed in free space
3.11	Know the order of the electromagnetic spectrum in terms of decreasing

	wavelength and increasing frequency, including the colours of the visible
	spectrum
3.12	Explain some of the uses of electromagnetic radiations
	 Radio waves: broadcasting and communications
	 Microwaves: cooking and satellite transmissions
	• Infrared: heaters and night vision equipment
	• Visible light: optical fibres and photography
	• Ultraviolet: fluorescent lamps
	• X-rays: observing the internal structure of objects and materials,
	including for medical applications
	 Gamma rays: sterilising food and medical equipment.
3.13	Explain the detrimental effects of excessive exposure of the human body to
5.15	electromagnetic waves, including:
	 microwaves: internal heating of body tissue
	• infrared: skin burns
	ultraviolet: damage to surface cells and blindness
	• gamma rays: cancer, mutation and describe simple protective measures against
	the risks
3.14	Know that light waves are transverse waves and that they can be reflected and
3.14	refracted
3.15	Use the law of reflection (the angle of incidence equals the angle of reflection)
3.16	Draw ray diagrams to illustrate reflection and refraction
3.17	Practical: investigate the refraction of light, using rectangular blocks, semi-
	circular blocks and triangular prisms
3.18	Know and use the relationship between refractive index, angle of incidence and
	angle of refraction n=sini/sinr
3.19	Practical: investigate the refractive index of glass, using a glass block
3.20	Describe the role of total internal reflection in transmitting information along
	optical fibres and in prisms
3.21	Explain the meaning of critical angle c
3.22	Know and use the relationship between critical angle and refractive index
	sinc = 1/n
3.23	Know that sound waves are longitudinal waves which can be reflected and
	refracted
3.24P	Know that the frequency range for human hearing is 20–20 000 Hz
3.25P	Practical: investigate the speed of sound in air
3.26P	Understand how an oscilloscope and microphone can be used to display a
	sound wave
3.27P	Practical: investigate the frequency of a sound wave using an oscilloscope
3.28P	Understand how the pitch of a sound relates to the frequency of vibration of
	the source
3.29P	Understand how the loudness of a sound relates to the amplitude of
	vibration of the source
Unit 4	Energy resources and energy transfers
4.1	Use the following units: kilogram (kg), joule (J), metre (m), metre/second (m/s),
	metre/second2 (m/s2), newton (N), second (s) and watt (W)
4.2	Describe energy transfers involving energy stores: • energy stores: chemical,

	kinetic, gravitational, elastic, thermal, magnetic, electrostatic, nuclear • energy transfers: mechanically, electrically, by heating, by radiation (light and sound)
4.3	Use the principle of conservation of energy
4.4	Know and use the relationship between efficiency, useful energy output and
	total energy output
4.5	Describe a variety of everyday and scientific devices and situations, explaining
	the transfer of the input energy in terms of the above relationship, including their
	representation by Sankey diagrams
4.6	Describe how thermal energy transfer may take place by conduction, convection
	and radiation
4.7	Explain the role of convection in everyday phenomena
4.8	Explain how emission and absorption of radiation are related to surface and
	temperature
4.9	Practical: investigate thermal energy transfer by conduction, convection and
4.10	radiation
4.10	Explain ways of reducing unwanted energy transfer, such as insulation
4.11	Know and use the relationship between work done, force and distance moved in the direction of the force: work done = force \times distance moved $W = F \times d$
4.12	the direction of the force: work done = force \times distance moved $W = F \times d$ Know that work done is equal to energy transferred
4.12	Know and use the relationship between gravitational potential energy, mass,
4.15	gravitational field strength and height: t GPE = $m \times g \times h$
4.14	Know and use the relationship: kinetic energy = $1/2 \times \text{mass} \times \text{speed}^2$
4.15	Understand how conservation of energy produces a link between gravitational
	potential energy, kinetic energy and work
4.16	Describe power as the rate of transfer of energy or the rate of doing work
4.17	Use the relationship between power, work done (energy transferred) and time
	taken P=W/t
4.18P	Describe the energy transfers involved in generating electricity using: •
	wind • water • geothermal resources • solar heating systems • solar cells •
	fossil fuels • nuclear power
4.19P	Describe the advantages and disadvantages of methods of large-scale
4.19P	
	Describe the advantages and disadvantages of methods of large-scale electricity production from various renewable and non-renewable resources
Unit 5 S	Describe the advantages and disadvantages of methods of large-scale electricity production from various renewable and non-renewable resources olids, liquids and gases
	Describe the advantages and disadvantages of methods of large-scale electricity production from various renewable and non-renewable resources olids, liquids and gases Use the following units: degree Celsius (°C), Kelvin (K), joule (J), kilogram
Unit 5 S	Describe the advantages and disadvantages of methods of large-scale electricity production from various renewable and non-renewable resources olids, liquids and gases Use the following units: degree Celsius (°C), Kelvin (K), joule (J), kilogram (kg), kilogram/metre3 (kg/m3), metre (m), metre2 (m2), metre3 (m3),
Unit 5 S 5.1	Describe the advantages and disadvantages of methods of large-scale electricity production from various renewable and non-renewable resources olids, liquids and gases Use the following units: degree Celsius (°C), Kelvin (K), joule (J), kilogram (kg), kilogram/metre3 (kg/m3), metre (m), metre2 (m2), metre3 (m3), metre/second (m/s), metre/second2 (m/s2), newton (N) and pascal (Pa)
Unit 5 S 5.1 5.2P	Describe the advantages and disadvantages of methods of large-scale electricity production from various renewable and non-renewable resources olids, liquids and gases Use the following units: degree Celsius (°C), Kelvin (K), joule (J), kilogram (kg), kilogram/metre3 (kg/m3), metre (m), metre2 (m2), metre3 (m3), metre/second (m/s), metre/second2 (m/s2), newton (N) and pascal (Pa) Use the following unit: joules/kilogram degree Celsius (J/kg °C)
Unit 5 S 5.1 5.2P 5.3	Describe the advantages and disadvantages of methods of large-scale electricity production from various renewable and non-renewable resources olids, liquids and gases Use the following units: degree Celsius (°C), Kelvin (K), joule (J), kilogram (kg), kilogram/metre3 (kg/m3), metre (m), metre2 (m2), metre3 (m3), metre/second (m/s), metre/second2 (m/s2), newton (N) and pascal (Pa) Use the following unit: joules/kilogram degree Celsius (J/kg °C) Know and use the relationship between density, mass and volume: ρ=m/V
Unit 5 S 5.1 5.2P 5.3 5.4	Describe the advantages and disadvantages of methods of large-scale electricity production from various renewable and non-renewable resources olids, liquids and gases Use the following units: degree Celsius (°C), Kelvin (K), joule (J), kilogram (kg), kilogram/metre3 (kg/m3), metre (m), metre2 (m2), metre3 (m3), metre/second (m/s), metre/second2 (m/s2), newton (N) and pascal (Pa) Use the following unit: joules/kilogram degree Celsius (J/kg °C) Know and use the relationship between density, mass and volume: ρ=m/V Practical: investigate density using direct measurements of mass and volume
Unit 5 S 5.1 5.2P 5.3 5.4 5.5	Describe the advantages and disadvantages of methods of large-scale electricity production from various renewable and non-renewable resources olids, liquids and gases Use the following units: degree Celsius (°C), Kelvin (K), joule (J), kilogram (kg), kilogram/metre3 (kg/m3), metre (m), metre2 (m2), metre3 (m3), metre/second (m/s), metre/second2 (m/s2), newton (N) and pascal (Pa) Use the following unit: joules/kilogram degree Celsius (J/kg °C) Know and use the relationship between density, mass and volume: ρ=m/V Practical: investigate density using direct measurements of mass and volume Know and use the relationship between pressure, force and area: P=F/A
Unit 5 S 5.1 5.2P 5.3 5.4	Describe the advantages and disadvantages of methods of large-scale electricity production from various renewable and non-renewable resources olids, liquids and gases Use the following units: degree Celsius (°C), Kelvin (K), joule (J), kilogram (kg), kilogram/metre3 (kg/m3), metre (m), metre2 (m2), metre3 (m3), metre/second (m/s), metre/second2 (m/s2), newton (N) and pascal (Pa) Use the following unit: joules/kilogram degree Celsius (J/kg °C) Know and use the relationship between density, mass and volume: ρ=m/V Practical: investigate density using direct measurements of mass and volume
Unit 5 S 5.1 5.2P 5.3 5.4 5.5	Describe the advantages and disadvantages of methods of large-scale electricity production from various renewable and non-renewable resources olids, liquids and gases Use the following units: degree Celsius (°C), Kelvin (K), joule (J), kilogram (kg), kilogram/metre3 (kg/m3), metre (m), metre2 (m2), metre3 (m3), metre/second (m/s), metre/second2 (m/s2), newton (N) and pascal (Pa) Use the following unit: joules/kilogram degree Celsius (J/kg °C) Know and use the relationship between density, mass and volume: ρ=m/V Practical: investigate density using direct measurements of mass and volume Know and use the relationship between pressure, force and area: P=F/A Understand how the pressure at a point in a gas or liquid at rest acts equally in
Unit 5 S 5.1 5.2P 5.3 5.4 5.5 5.6	Describe the advantages and disadvantages of methods of large-scale electricity production from various renewable and non-renewable resources olids, liquids and gases Use the following units: degree Celsius (°C), Kelvin (K), joule (J), kilogram (kg), kilogram/metre3 (kg/m3), metre (m), metre2 (m2), metre3 (m3), metre/second (m/s), metre/second2 (m/s2), newton (N) and pascal (Pa) Use the following unit: joules/kilogram degree Celsius (J/kg °C) Know and use the relationship between density, mass and volume: ρ=m/V Practical: investigate density using direct measurements of mass and volume Know and use the relationship between pressure, force and area: P=F/A Understand how the pressure at a point in a gas or liquid at rest acts equally in all directions
Unit 5 S 5.1 5.2P 5.3 5.4 5.5 5.6 5.7	Describe the advantages and disadvantages of methods of large-scale electricity production from various renewable and non-renewable resources olids, liquids and gases Use the following units: degree Celsius (°C), Kelvin (K), joule (J), kilogram (kg), kilogram/metre3 (kg/m3), metre (m), metre2 (m2), metre3 (m3), metre/second (m/s), metre/second2 (m/s2), newton (N) and pascal (Pa) Use the following unit: joules/kilogram degree Celsius (J/kg °C) Know and use the relationship between density, mass and volume: $\rho=m/V$ Practical: investigate density using direct measurements of mass and volume Know and use the relationship between pressure, force and area: P=F/A Understand how the pressure at a point in a gas or liquid at rest acts equally in all directions Know and use the relationship for pressure difference $p = h \times \rho \times g$
Unit 5 S 5.1 5.2P 5.3 5.4 5.5 5.6 5.7	Describe the advantages and disadvantages of methods of large-scale electricity production from various renewable and non-renewable resources olids, liquids and gases Use the following units: degree Celsius (°C), Kelvin (K), joule (J), kilogram (kg), kilogram/metre3 (kg/m3), metre (m), metre2 (m2), metre3 (m3), metre/second (m/s), metre/second2 (m/s2), newton (N) and pascal (Pa) Use the following unit: joules/kilogram degree Celsius (J/kg °C) Know and use the relationship between density, mass and volume: $\rho=m/V$ Practical: investigate density using direct measurements of mass and volume Know and use the relationship between pressure, force and area: P=F/A Understand how the pressure at a point in a gas or liquid at rest acts equally in all directions Know and use the relationship for pressure difference $p = h \times \rho \times g$ Explain why heating a system will change the energy stored within the system and raise its temperature or produce changes of state Describe the changes that occur when a solid melts to form a liquid, and
Unit 5 S 5.1 5.2P 5.3 5.4 5.5 5.6 5.7 5.8P 5.9P	Describe the advantages and disadvantages of methods of large-scale electricity production from various renewable and non-renewable resources olids, liquids and gases Use the following units: degree Celsius (°C), Kelvin (K), joule (J), kilogram (kg), kilogram/metre3 (kg/m3), metre (m), metre2 (m2), metre3 (m3), metre/second (m/s), metre/second2 (m/s2), newton (N) and pascal (Pa) Use the following unit: joules/kilogram degree Celsius (J/kg °C) Know and use the relationship between density, mass and volume: $\rho=m/V$ Practical: investigate density using direct measurements of mass and volume Know and use the relationship between pressure, force and area: P=F/A Understand how the pressure at a point in a gas or liquid at rest acts equally in all directions Know and use the relationship for pressure difference $p = h \times \rho \times g$ Explain why heating a system will change the energy stored within the system and raise its temperature or produce changes of state Describe the changes that occur when a solid melts to form a liquid, and when a liquid evaporates or boils to form a gas
Unit 5 S 5.1 5.2P 5.3 5.4 5.5 5.6 5.7 5.8P	Describe the advantages and disadvantages of methods of large-scale electricity production from various renewable and non-renewable resources olids, liquids and gases Use the following units: degree Celsius (°C), Kelvin (K), joule (J), kilogram (kg), kilogram/metre3 (kg/m3), metre (m), metre2 (m2), metre3 (m3), metre/second (m/s), metre/second2 (m/s2), newton (N) and pascal (Pa) Use the following unit: joules/kilogram degree Celsius (J/kg °C) Know and use the relationship between density, mass and volume: $\rho=m/V$ Practical: investigate density using direct measurements of mass and volume Know and use the relationship between pressure, force and area: P=F/A Understand how the pressure at a point in a gas or liquid at rest acts equally in all directions Know and use the relationship for pressure difference $p = h \times \rho \times g$ Explain why heating a system will change the energy stored within the system and raise its temperature or produce changes of state Describe the changes that occur when a solid melts to form a liquid, and

Practical: obtain a temperature-time graph to show the constant
temperature during a change of state
Know that specific heat capacity is the energy required to change the
temperature of an object by one degree Celsius per kilogram of mass (J/kg
°C)
Use the equation: change in thermal energy = mass × specific heat capacity
× change in temperature $\Delta Q = m \times c \times \Delta T$
Practical: investigate the specific heat capacity of materials including water
and some solids
Explain how molecules in a gas have random motion and that they exert a force
and hence a pressure on the walls of a container.
Understand why there is an absolute zero of temperature which is –273 °C
Describe the Kelvin scale of temperature and be able to convert between the
Kelvin and Celsius scales
Understand why an increase in temperature results in an increase in the average
speed of gas molecules
Know that the Kelvin temperature of a gas is proportional to the average kinetic
energy of its molecules
Explain, for a fixed amount of gas, the qualitative relationship between:
• pressure and volume at constant temperature
pressure and Kelvin temperature at constant volume
Use the relationship between the pressure and Kelvin temperature of a fixed
mass of gas at constant volume: $P1/T1 = P2/T2$
Use the relationship between the pressure and volume of a fixed mass of gas at
constant temperature: $p1 V1 = p2v2$

Unit 6 Magnetism and electromagnetism

6.1	Use the following units: ampere (A), volt (V) and watt (W)
6.2	Know that magnets repel and attract other magnets and attract magnetic
	substances
6.3	Describe the properties of magnetically hard and soft materials
6.4	Understand the term magnetic field line
6.5	Know that magnetism is induced in some materials when they are placed in a magnetic field
6.6	Practical: investigate the magnetic field pattern for a permanent bar magnet and
	between two bar magnets
6.7	Describe how to use two permanent magnets to produce a uniform magnetic
	field pattern
6.8	Know that an electric current in a conductor produces a magnetic field around it
6.9P	Describe the construction of electromagnets
6.10P	Draw magnetic field patterns for a straight wire, a flat circular coil and a
	solenoid when each is carrying a current
6.11P	Know that there is a force on a charged particle when it moves in a
	magnetic field as long as its motion is not parallel to the field
6.12	Understand why a force is exerted on a current-carrying wire in a magnetic field,
	and how this effect is applied in simple d.c. Electric motors and loudspeakers
6.13	Use the left-hand rule to predict the direction of the resulting force when a wire
	carries a current perpendicular to a magnetic field
6.14	Describe how the force on a current-carrying conductor in a magnetic field

	changes with the magnitude and direction of the field and current
6.15	Know that a voltage is induced in a conductor or a coil when it moves through a magnetic field or when a magnetic field changes through it and describe the factors that affect the size of the induced voltage
6.16	Describe the generation of electricity by the rotation of a magnet within a coil of wire and of a coil of wire within a magnetic field, and describe the factors that affect the size of the induced voltage
6.17P	Describe the structure of a transformer, and understand that a transformer changes the size of an alternating voltage by having different numbers of turns on the input and output sides
6.18P	Explain the use of step-up and step-down transformers in the large-scale generation and transmission of electrical energy
6.19P	Know and use the relationship between input (primary) and output (secondary) voltages and the turns ratio for a transformer
6.20P	Know and use the relationship: input power = output power for 100% efficiency

Unit 7 Radioactivity and particles

7.1	Use the following units: becquerel (Bq), centimetre (cm), hour (h), minute (min)
	and second (s)
7.2	Describe the structure of an atom in terms of protons, neutrons and electrons and
	use symbols such as 14 C ₆ to describe particular nuclei
7.3	Know the terms atomic (proton) number, mass (nucleon) number and isotope
7.4	Know that alpha (α) particles, beta (β -) particles, and gamma (γ) rays are
	ionising radiations emitted from unstable nuclei in a random process
7.5	Describe the nature of alpha (α) particles, beta (β -) particles, and gamma (γ)
	rays, and recall that they may be distinguished in terms of penetrating power and
	ability to ionise
7.6	Practical: investigate the penetration powers of different types of radiation using
	either radioactive sources or simulations
7.7	Describe the effects on the atomic and mass numbers of a nucleus of the
	emission of each of the four main types of radiation (alpha, beta, gamma and
	neutron radiation)
7.8	Understand how to balance nuclear equations in terms of mass and charge
7.9	Know that photographic film or a Geiger-Müller detector can detect ionising
	radiations
7.10	Explain the sources of background (ionising) radiation from Earth and space
7.11	Know that the activity of a radioactive source decreases over a period of time
	and is measured in becquerels
7.12	Know the definition of the term half-life and understand that it is different for
	different radioactive isotopes
7.13	Uuse the concept of the half-life to carry out simple calculations on activity,
	including graphical methods
7.14	Describe uses of radioactivity in industry and medicine
7.15	Describe the difference between contamination and irradiation
7.16	Describe the dangers of ionising radiations, including: • that radiation can cause
	mutations in living organisms • that radiation can damage cells and tissue • the
	problems arising from the disposal of radioactive waste and how the associated
	risks can be reduced.
